

Making the most of our most precious resource

“Where there is no water, there is no life.” We know that this is a fundamental rule of nature. Making the most of the life-giving power of water is the first step in sustaining and helping life flourish.

Africa is a continent where for centuries civilisations have revolved around water, or more precisely the lack thereof. Every African knows, from firsthand experience, that water is the most precious commodity we have. With Super Gro, making the most of our water can be both environmentally friendly and economically rewarding.

The Key: Making Water Wetter.

Most of us know that the best way to save water is to use less. But another important way is to make the most of the water you use. That’s exactly what Super Gro does.

GNLD’s Super Gro is specially formulated to help gardeners and growers get the greatest value out of every drop of water used. It does this by reducing the water’s surface tension, making “water wetter”, boosting its ability to deliver life-sustaining moisture deeper into plant root systems.

This not only brings more water to where it’s needed, but reduces water loss to evaporation and run-off. More water

reaches the plants roots and stays there longer, supporting better growth, faster time to maturity and harvest.

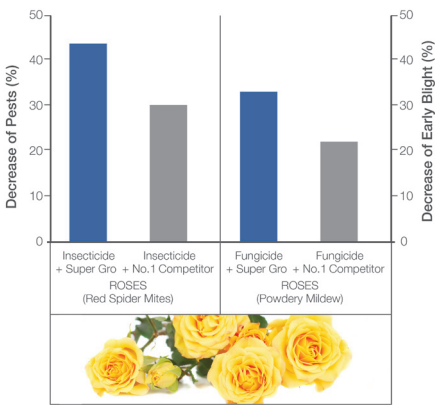

Helping crop treatments do their jobs better

In addition to making water wetter, GNLD’s Super Gro is a high performance adjuvant too. An adjuvant is something that helps something else do a better or more thorough job. Super Gro acts as a powerful adjuvant for most crop treatments where water is used, including fertilizers, pesticides and fungicides, causing them to penetrate deeper, stick better, stay longer, and work more effectively.

Proven Performance Booster

- Improves performance of agricultural aids such as pesticides, insecticides and fertilisers.

Super Gro assists most crop treatments do a better job by helping them to penetrate deeper, stick better, stay longer, and work more effectively.

PROVEN TEST RESULTS FROM THE UNIVERSITY OF NAIROBI

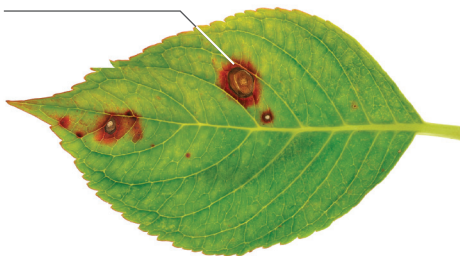

- Early blight of tomatoes was decreased by 46%, 53% better result than fungicide alone.
- Whitefly and aphid infestation of tomatoes were reduced by 63% and 94% respectively and of French Beans by 66% and 79% respectively when Super Gro was used with market leading pesticides.
- Angular leaf spot of French Beans was decreased by 41% when Super Gro was used with a fungicide.
- Red spider mite infestation of roses was decreased by 43% and powdery mildew by 33% when Super Gro was used with the crop treatment.

Benefits were confirmed across multi-season trials, demonstrating consistent improvements in crops year after year.

IN SOME PARTS OF THE WORLD whitefly (far right) has caused a 50-60% crop loss. Its close cousin the aphid (right) is also a primary crop infestation that robs plant energy and depletes crop yields. Insecticides play an important role in controlling these pests and protecting crops.

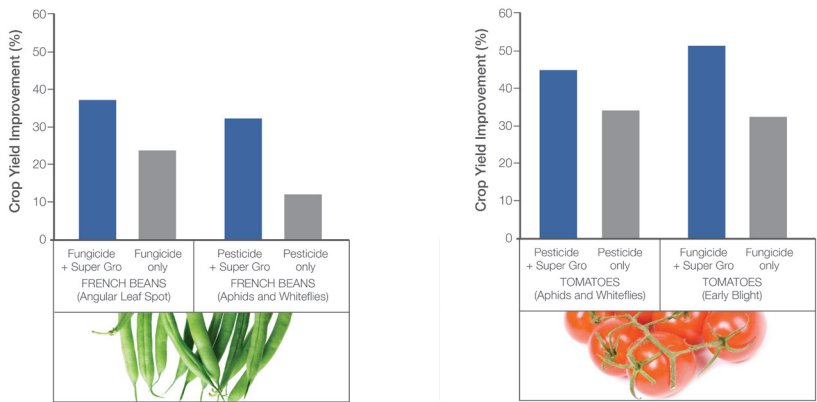

Early Blight: Common in potato and tomato, early blight first appears on lower leaves as small brown spots with concentric rings that form a “bull’s eye” pattern. Infected leaves turn yellow and die.

IMPROVED CROP YIELDS

In addition to the significant improvement of crop treatment performance, using Super Gro also increased crop yield by as much as 167% more than crop treatment alone provided.

INCREASED PROFITS!

Getting the most from the water and the crop treatments you use and maximising your crop yields all adds-up to more profit for you, the grower.

Unlock the Power of Water!

MAXIMISE YOUR PROFITS!

Improves soil penetration of water!
Improves pesticide performance!
Improves fungicide performance!
Improves crop yield!

Super Gro

A multi-purpose agricultural surfactant, specifically formulated to work with modern crop treatments and application equipment.

Versatile!

- Works with any crop treatment designed for use with water.
- Works as a wetting agent, to make water wetter.
- Works as a spreader-sticker to provide better treatment adhesion and retention on plant surfaces.
- Works as an adjuvant to maximise crop treatment performance.
- Works as an emulsifier for improved oil dispersion.

Economical!

- Concentrated formula performs at 1000 to 1 dilution.
- One product works for many purposes.

Easy to use!

- Mixes easily in hard or soft water.
- Long shelf-life.
- No special handling precautions.
- Stores well in non-temperature controlled conditions.

Safe!

- Use on both indoor and outdoor plants.
- Non-toxic, non-caustic, non-flammable.

And saves you money!

5 Litre. Code: 2741

What Super Gro users are saying

“I firmly believe that Super Gro has largely contributed to the fleshiness, flavour and sweetness of my crop, so much so that I am unable to meet the demands from the export Companies.” **Jeremiah Muriuki Ngure.**

“When you mix Super Gro with water, you see a remarkable difference on the leaves, stem and the yield. It acts like a natural greenhouse and has tripled the yield of my tomato crop.” **Peterson Mwangi Ndegwa.**

“The results are amazing. The leaves are brighter and the cabbage yields are much higher.” **Peter Maina.**

The testimonies above are personal views of Super Gro users.

Super Gro is another fine product from GNLD, a world leader in products for health, beauty, home and environment. For use instructions and other details please see the Super Gro label or Super Gro usage guide.
